- Improvements
- Fixed issues
- Known issues

Studio 5.3.0.RC

Studio 5.3.0.RC is a patch release that includes new features, improvements, and bug fixes.

- Updated grammar files for JavaScript and generated a new ES6/7 compliant parser for Studio

Improvements

- Importing app into studio restructures tiapp.xml unnecessary

Fixed issues

- TISTUD-9031 (<https://jira.appcelerator.org/browse/TISTUD-9031>) - Studio installs outdated hyperloop plugin
- TISTUD-9042 (<https://jira.appcelerator.org/browse/TISTUD-9042>) - iOS: Create modules in "dist" directory
- TISTUD-9074 (<https://jira.appcelerator.org/browse/TISTUD-9074>) - Studio unable to load provisioning profiles after SDK/CLI upgrade
- TISTUD-9090 (<https://jira.appcelerator.org/browse/TISTUD-9090>) - Appc studio encounters java.lang.NullPointerException in 5.1.0.201806130758
- TISTUD-9092 (<https://jira.appcelerator.org/browse/TISTUD-9092>) - Error occurred during "Getting Diagnostic Logs"
- TISTUD-9099 (<https://jira.appcelerator.org/browse/TISTUD-9099>) - Incorrect filename shown in message on the error marker
- TISTUD-9101 (<https://jira.appcelerator.org/browse/TISTUD-9101>) - Install android 8.1 by default in the appcelerator studio

Known issues

- No know or reported issues for version 5.3.0
